

Weston Clark

Portland, OR | westoclark@gmail.com | github.com/westonclark | linkedin.com/in/westoclark | westonclark.dev

SKILLS

- **Languages:** TypeScript, JavaScript, C++, C, Go
- **Technologies:** Node.js, Express, Fastify, MySQL, PostgreSQL, Docker, Kubernetes, Skaffold, Helm, ArgoCD, GitOps, CMake, Git, GCP, AWS, RabbitMQ, REST API, React.js, Tailwind, Next.js, Jest, Vitest, JUCE

WORK EXPERIENCE

Software Engineer II

May 2024 — Present

Madwire

- Responsible for the central APIs and databases for all user, account, and permission management across multiple products
- Owned the internal auth libraries and middleware that made the identity management system built around Keycloak
- Designed a custom role-based permission system for authorizing actions and resource access throughout the site
- Built an automated data warehouse ingestion service using GCP Pub/Sub for reporting, metrics, and LLM model training
- Maintained notification services that handled enqueueing and sending SMS, email, and push notifications to users
- Migrated legacy PHP microservices to a Node.js mono repo, improving performance while reducing complexity and cost
- Worked across teams to define product requirements and transform them into high-quality code and documentation
- Maintained test suites and CI/CD pipelines with Jest and ArgoCD, optimizing for deployment times and compute cost

Audio Systems Engineer

Jan 2019 — May 2024

Weston Clark Mixing LLC

- Contracted with AVL integrators and touring production houses to provide audio software and production services
- Designed and ran audio systems for tours made up of digital audio networks, PA loudspeakers, and audio mixing consoles
- Wrote custom software and scripts to integrate musical performances with production infrastructure in real time
- Provided Tour Management services, managing travel logistics, advancing venue riders, and settling ticket sales

Technical Director

Jan 2018 — Jan 2019

Westside AJC

- Led and staffed the production team of 12 audio/video operators for a church of 5,000 weekly attendees
- Trained non-technical volunteers to operate high end, theatrical-level audio, video, and lighting equipment
- Collaborated with design and finance teams to turn creative ideas and budgets into executable technical plans

PROJECTS

Watchdogs.io

www.github.com/oslabs-beta/Watchdogs

- An observability platform built for real-time monitoring of AWS Lambda performance metrics and logging
- Integrated with CloudWatch to retrieve performance data and display it using interactive dashboards and charts
- Designed an internal caching system with Redis to reduce third-party API costs and improve page load times

Fader Keys

www.github.com/westonclark/fader-keys-source

- A desktop application for controlling fader movements in digital audio workstations via MIDI CC messages
- Deployed a custom online store and user dashboard for purchasing, downloading, and authorizing the application
- Application built with C++ and Objective-C++, website built with Next.js, Stripe, Clerk Auth, and Neon DB

Multi Effect Audio Plugin

www.github.com/westonclark/multi-effect-plugin

- An effect processor for applying DSP effects to audio recordings like phaser, chorus, overdrive, filters, and EQ
- Built using C++, the JUCE framework, and Xcode build tools

HTTP Server

www.github.com/westonclark/http-server-c

- An HTTP server written from scratch in C with no external libraries or frameworks
- Handles TCP socket connections, HTTP request parsing, and serves static HTML files from the file system

EDUCATION

Conservatory of Recording Arts and Sciences

Oct 2013 — May 2014

Audio Recording and Production Certification
